

Wichita Daily Eagle

HE INVENTED THE LOOM.

SKETCH OF THE LIFE AND WORK OF
JOSEPH M. JACQUARD.

His Machine Revolutionized Silk Weaving—With It One Man Can Do Work That Formerly Required from Six to Ten People, and Do It Better.

Joseph Marie Jacquard will always be regarded as one of the foremost inventors in the textile world, and his loom as one of the most brilliant of industrial inventions. Few have ever accomplished such a revolution in industry, and still fewer have by so doing alleviated the sufferings and improved the condition of their fellow laborers to the extent realized by Jacquard.

Joseph Marie Jacquard was in the full bloom of his life and self-made man of the people, and it is this fact that makes the study of his life particularly interesting to an American.

Born at Lyons July 7, 1752, son of a silk weaver, he assisted his father at the loom from his earliest years, acting as a "draw boy," as those workmen were termed who pulled the strings by which the warp was manipulated on the loom.

Here he became familiar with all the work of the "draw boys' life, and so deeply did they impress themselves on his mind that the desire to do away with this drudgery continued to be his leading thought throughout life.

The boy's health gave way at the loom, so he was apprenticed to a bookbinder and later to a type founder. But the demon of inventive genius had already seized upon him, and he spent most of his time in tinkering, and was regarded as hopelessly lazy by those around him.

When Jacquard was twenty years of age his father died, leaving him a small patrimony, with which the young man began weaving broadens on his own account, and soon after married. But he devoted most of his time to tinkering around on his looms, and this, with his inexperience, brought about his business failure within a few years.

Silk industry being at a low tide, young Jacquard had to accept work in a linen mill, while his wife found employment in plaiting straw hats.

In 1790 the idea of a loom that would do away with the "draw boys' assumed definite shape in Jacquard's mind, but his extreme poverty rendered it impossible for him to construct a model at that time. However, he did not despair, and a copy of "Poor Richard's Almanac," which came into his hands about this time, encouraged him all the more to persevere and to try to triumph in spite of his poverty.

Domestic afflictions now overwhelmed him. Having enlisted in the army for the national defense with his young son, he saw the latter fall at his side in an engagement on the Rhine. Returning to Lyons, Jacquard arrived just in time to be at the deathbed of his wife.

He was employed as day laborer in a factory, and devoted his evenings with great zeal to the modeling of his favorite idea. Most of the work was done with a jackknife. In 1800 his loom was finished.

A model sent to the industrial exposition in 1801 brought him a bronze medal and a call to Paris to repair the looms of the "Conservatoire des Arts et Metiers," at a salary of 3,000 francs per annum. While there he saw the loom with which Vancanson had vainly tried to solve the question which occupied Jacquard, and from this loom our inventor gained some new ideas.

He returned to Lyons, and after two years' faithful work succeeded in bringing forth a loom which effectively solved the difficulty, and enabled a single weaver to weave figured goods. The government at once granted him a pension of 3,000 francs and a royalty of fifty francs per loom.

To understand exactly the value of this invention it must be borne in mind that up to this time the weaving of figured goods required from five to ten workmen to each loom, most of them being employed in pulling the strings, by which means the warp was opened for the passage of the shuttle. A string had to be drawn for every passage of the shuttle. Thus the "draw boys" had to work rapidly, the pulling was heavy, necessitating a strained position and requiring the most painful exertions, as a single mistake would mar the figure. For this clumsy apparatus of strings and pedals, requiring the attention of a number of workmen, Jacquard substituted a contrivance as simple as ingenious, enabling a single workman to execute the most complex patterns as easily as plain goods.

Not only were the "draw boys" dispensed with, but the goods were made with a finish and exactness which before was not even dreamed of.

However, in spite of Jacquard's complete success, his loom was neither generally taken up by manufacturers at once nor the invention hailed with delight by the weavers. Every new loom threw four or more workmen out of work. Even the "draw boys" preferred a life of torture and deformity to starvation. Jacquard was publicly assaulted by his enraged fellow workmen and almost precipitated into the Rhone. Even the "Council des Prud'hommes" at one time ordered the destruction of the new loom to appease the wrath of the weavers.

But Jacquard's loom, like every truly great invention, was bound to triumph, and by 1813 it had firmly established itself throughout the Lyons workshops.

Numerous lucrative offers were now made Jacquard from abroad, particularly from England, but he preferred remaining in Lyons, giving himself up entirely to his native town. Later on he purchased a small estate at Oullins, near Lyons, where he died Aug. 7, 1834, aged eighty-two years.

It may be said that to Jacquard's invention is due not only the greatness of Lyons in the silk world, but the tremendous expansion of the silk industry the world over as well.

Its influence has, however, not been confined to the silk world, the weaving of cotton, linen, wool, jute, etc., having been affected almost as much as that of silk—Cor. Dry Goods Economist.

Cause for Dissatisfaction.

Merchant—The postal service is in a wretched condition.

Friend—Never noticed it.

"Well, I have. During last month I sent out one hundred and fifty statements of account, with requests for immediate payment, and so far as I can learn, not more than two of my customers received their letters."—Exchange.

Wichita Wholesale & Manufacturing Houses.

The houses given below are representative ones in their line, and thoroughly reliable. They are furnished thus for ready reference for the South generally, as well as for city and suburban buyers. Dealers and inquirers should correspond direct with names given.

GLOBE IRON WORKS,
MANUFACTURERS OF
Steam Engines, Boilers and Pumps, and Dealers in Brass Goods, Rubber and Hemp Packing, Steam Fittings, Etc. Repairing of all kinds of Machinery. Orders promptly filled for all kinds of Sheet Iron Work. All kinds of castings made.
A. FLAGG, Proprietor. - - - - - Wichita, Kansas.

ROSS BROTHERS,
Wholesale and Retail Dealers in
FIELD GARDEN AND FLOWER SEED.
Orders by mail carefully and promptly filled.
219 East Douglas Ave. Wichita, Kan.

The Stewart Iron Works,
MANUFACTURERS OF
IRON FENCING,
Architectural, Wrought and Cast
Iron Work for Buildings.
Factory: South Washington Avenue
Wichita, Kansas.

TO ART DEALERS AND ARTISTS.
Artists' Materials, Pictures, Mountings and Frames
Wholesale and Retail. Catalogue free.
MA. ORDERS PROMPTLY ATTENDED.
F. P. MARTIN, 114 Market St.
Wichita, Kan.

THOMAS SHAW
Wholesale Dealer in
Pianos and Organs
Sheet music and books. All kinds of music.
220 Main Street, Wichita, Kansas.

SWAB & GLOSSER,
TAILORS
And Jobbers of Woollens and Tailors' Trimmings.
145 N. Main Street, - - - - - Wichita.

L. M. COX,
Manufacturing Confectioner
And Jobber in Figs, Dates, Cigars, Foreign and Domestic Nuts, Cider, Paper Bags, Paper Boxes, Candy Jars, Trays, Etc.
215 and 217 South Main St., - - - - - Wichita, Kansas.

THE C. E. POTTS DRUG CO.
(Formerly Charles E. Potts & Co., Cincinnati, O.)
WHOLESALE DRUGGISTS.
Goods Sold at St. Louis and Kansas City Prices.
233 and 235 South Main Street, - - - - - Wichita, Kansas.

LEWIS B. SOLOMON
Wholesale Cigars,
BOARD OF TRADE BUILDING, WICHITA, KANSAS.
Our leading brands of 5 cent cigars are La Marca, De Merito, La Flor de Stadel, La Perfecto, Key Stone, King Kong, Havana, etc., etc., etc. Merchants sending in orders will receive prompt attention, all goods guaranteed. We also carry a full line of Key West Imported and Domestic Goods.

THE WICHITA OVERALL AND SHIRT MANUFACTURING CO.
MANUFACTURERS AND JOBBERS OF
Overalls, Jeans, Cassimere and Cottonade Pants; Duck Lined Coats and Vests; Fancy Flannel and Cotton Overshirts; Canton Flannel Undershirts, Drawers, Etc.
Factory and Salesroom 139 N. Topeka, Wichita. Correspondence Solicited.

TWO LOVES IN A LIFE.
The Most Thrilling and Passionate Love Story Ever Written.
[This story will not be published in book form.]
CHAPTER I.
Strangers once, but lovers now.
Oh, the dreamy past is now and brown;
Take an ax and hew it down.

Reginald Travers leaned carelessly against the fence. He held a scented handkerchief in one hand, and smoked his Havana with the other.

"Hail, hail!" he laughed, that low, rippling, musical laugh that had thrilled the proud heart of Ethel Beaudouin, the aristocratic heiress of Thornfield manor—but to return to the past.

Then Reginald Travers' eyes glanced toward the luxurious apartment and a sorrowful smile rippled across his face and broke in billows against his classic pompadour. At that instant there was a loud ring at the door.

"Fool that I am!" muttered Reginald Travers. "Why did I ever tie myself to that white faced girl. Thank heaven, she knows not that I am an ex-cise commissioner. But if I am betrayed—and a pallor of death overspread that mobile countenance.

"But no," he resumed; "that can never be. She awaits me at the little vine covered cottage in Hoboken. She little thinks that Andrew McGuffey, the artistic calligrapher, her husband and Reginald Travers, the ex-cise commissioner, who is soon to wed the peerless Ethel Beaudouin, the rich heiress, are one and the same."

Far over in Hoboken the sad faced girl, Bella McGuffey, was cooking flapjacks on an oil stove. Marks of flour and of care were on her pretty face, while her big, wide, penny eyes were filled with tears that anon fell down on the griddle and spotted the flapjacks. Then all at once a sudden resolve seized her. Taking a large cloth that hung behind the door, she enveloped her face in it. "Heaven help me!" she cried, as she sped onward to the grim and ghastly ferry. "I must blink them, for I haven't a penny!"

CHAPTER II.
"She refused to tell when a reporter called, but only said that it was a plot, plotted with a criminal, the front being tricked, and a stick thrown to the overboard, with a second plot, the whole affair of golden gauze dyed screws wire."—Romance of a Wire Dress.

In a brilliantly lighted Murray Hill mansion sat Ethel Beaudouin, the heiress of Thornfield manor. On every side were strewn the evidences of wealth and luxury. A Broadway race shed its fragrance from an ivy-scaled Japanese vase, real coral burned in the open grate. Ah, Ethel Beaudouin had never felt poverty!

Her beauty was of the rich, dark, southern type that costs money. Her argent hidden eyes glanced carelessly over a libretto of "Raffaello and the Eve." Ethel Beaudouin was one of those bright butterflies that bask in the sunshine and have pie three times a day.

The footman in the bird's eye maple plush announced in rich Castilian accents, "Mistress Reginald Travers." The next instant her form was locked in his embrace and they had gone to dress.

Eno Furniture Co.
106 West Douglas Ave.
REFRIGERATORS,
ICE CHESTS and
CHILDREN'S CARRIAGES.

Wholesale Grocers,
203 and 205 N. WATER STREET.
Are now ready for business. Keep a Full Line of Staple and Fancy Groceries Woodenware and Notions.

A WOMAN OF BRAINS.
Mrs. Rotta's Lifelong Devotion to Literature and Art.
"Mrs. Anne Charlotte Lynch Rotta" such was the full name in the announcement of the death of Professor Vincenzo Rotta's wife recently in New York and but very few who read it remembered that this kindly old lady was once quite noted among American authoresses. She was then Charlotte Lynch and besides her poems her "Paul at Athens," "Wasted Fountains," "Webster" and other works were extensively read. But a new generation has risen since they were written, and American authoresses have multiplied many fold.

Her father was one of those stanch young Irishmen who supported Lord Edward Fitzgerald; as a result he languished four years in prison, and refusing to take the oath of allegiance to the British government was ordered to leave the country. He located in Bennington, Vt., where Charlotte was born in 1820. She received a thorough education, and early displayed literary ability, first producing a compilation called the "Rhode Island Book." She then resided at Providence, R. I. In 1843 she removed to New York city and pursued a literary career till her marriage with Professor Rotta in 1855.

She set in motion the work which resulted in a fund of which the interest is to be paid from time to time for the best essay on "The Condition of Woman." As a contribution to this fund (first projected to aid the wounded in the Franco-Prussian war) she prepared an album of original sayings, autographs and photographs of prominent men, sketches of noted artists, etc., which sold for \$5,000. In art also she was an amateur of no mean abilities, and was always an active promoter of all schemes for the higher education of woman.

MR. LYNCH, the chairman, and J. Elfreth Watkins, the secretary of the committee, have been in communication with inventors all over the country, and a large assemblage of distinguished men, including such noted names as Edison, Corlies and Bell, is anticipated. There will be excursions, speeches and displays.

While the prime object is of course to mark the close of a century of American invention, the needs of the patent office will be discussed, and a concerted pressure will be brought to bear upon the representatives in Congress from all the districts in the United States to pass laws to facilitate the operations of the bureau.

It is easy to stain or oil a hard wood floor, but what to do with the ordinary cottage floor is another matter. A simple and cheap method of treating the latter is to have it smoothed down by a carpenter, painted, and the cracks filled in with putty, and finally painted over with several coats of coats and varnished. The paint for such a floor should be chosen in some dark wood shade which harmonizes with the decorations of the room, never in a conspicuous, staring color that refuses to be in place. Probably a covering of matting is as useful as any way of treating such a floor which is to be carpeted with rugs.

MR. LYNCH, the chairman, and J. Elfreth Watkins, the secretary of the committee, have been in communication with inventors all over the country, and a large assemblage of distinguished men, including such noted names as Edison, Corlies and Bell, is anticipated. There will be excursions, speeches and displays.

SCIENCE AND PROGRESS.

TOPICS SURE TO INTEREST PROGRESSIVE MEN AND WOMEN.

Electric Attraction Demonstrated with Commonplace Articles—Simple Scientific Recreations Suitable to the Drawing Room.

Take in dry weather a bit of this paper, say a cigarette paper, and rub it smartly with the hand, or still better, with a brush. In a short time it will become electrified, and will adhere to your hand, your face or your dress, resisting your efforts to displace it, as if it was coated with some glutinous substance.

Now electrify in the same way a piece of thick paper, say a postcard, and you will find that just as happens with glass, seal-

ELECTRIC ATTRACTION.

The French government has had conducted for them a series of experiments on gun steel at very low temperatures, says The Railway Review. The specimens, some of which were hardened and others not hardened, were cooled to 75 or 100 degrees Fahrenheit by immersing them in a bath of carbonic acid gas and sulphuric ether. The test bars were prepared in sets of three, one to be used after being cooled to about 100 degrees below zero, while the other two were tested at normal temperature.

As a result of these tests it was found that both the hardened and unhardened bars had their elastic limit raised about 11 per cent. when tested cold. The breaking strain of the hardened bars was increased about 6 per cent., and that of the unhardened bars about 3 per cent. by cooling. The elongation of the hardened bars was diminished 14 per cent., and the unhardened bars 13 per cent. These changes were only temporary, however, as with the restoration of the bars to the ordinary temperature their original properties returned.

Another series of tests were conducted for which the bars were prepared in sets of three as before. These were tested by means of a drop weight, instead of being subject to tension, as in the previous case. It was found that the cooling of the bars increased their brittleness. As an average each hardened bar required 12.57 blows to fracture it at 100 degrees below zero and 14.4 blows at the normal temperature. The unhardened bars required 5.9 blows to break when cold and 14.6 blows under ordinary conditions. As in the previous tests, the metal regained its qualities when restored to a normal temperature.

Demagnetizing a Watch.
A novel method of demagnetizing a watch is, according to The Electrical Work, due to a Massachusetts genius. The apparatus consists of a compound horseshoe magnet placed erect, with its poles upward and a suitable support placed at some distance, perhaps two or three feet, above it. From this support is suspended by a twisted thread a cardboard tray in which is the watch to be demagnetized.

W. BAKER & Co.'s

Breakfast Cocoa

From which the excess of oil has been removed, is Absolutely Pure and it is Soluble.

No Chemicals
are used in its preparation. It has more than three times the strength of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, costing less than one cent a cup. It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

ALL AROUND THE HOUSE.
Fabrics and Designs That are Popular in Ornamental Needlework.

White flannel is used occasionally for tea-cloths; these are plaited at the edge and well covered with fine embroidery. Delicate shades of silk serve best for flannel work.

A coat cover decorated in a novel fashion. It is of cloth, and sprays of flowers tied with ribbons form the design; but the novelty consists in the flowers (which are principally harebells of blue, pink and yellow tints) being raised from the ground. They are sewn on to look as though they were the natural flowers. No fadings is used to raise them? They are hollow, but, being of cloth, they will not easily get crumpled.

A new way of making up a tea cozy is to slash the sides and fill in, with puffs of pongee silk, the cozy is of plush, embroidered with arabesques.

Cross stitch embroidery is as fashionable as ever, and it is certainly well adapted for the decoration of household linen. Nothing looks better for ornamenting chamber towels than a strip of cross stitch. Most of the designs are carried out in blue and red, but they also show well in shades of gold. The best of the towels have insertions of lace and handsome knotted fringes. Some with Russian designs—quaint figures are embroidered twelve inches or more deep at both ends. These are the over towels.

Embossed camp stools fitted with work-bags (the lining of the bags matches the shade of the embossed stool, but the outside is of some bold patterned cretonne) are much admired. They are made on a large scale, and will not tip over readily.

White satin is being used for cushions, though not so handsome as the damasks and brocades. It is very charming if the decoration is rich. Arabesque or fine chintz flowers with silk embroidered foliage make the most perfect decoration imaginable on the sheeny white ground. Water green arabesque with light bronze foliage, and soft brown arabesque with delicate yellow green leaves, are lovely colorings. The double silk frill that surrounds the cushion matches the flowers.

Bermuda Bottled.
"You must go to Bermuda if you do not, you will not be responsible for the consequences." But, doctor, I cannot leave my home at this time nor the money." "Well, if that is impossible, try
